Description

The **presence sensor** is a new device in the MyVirtuoso Home line equipped with 24 GHz millimeter wave Doppler technology. It is able to accurately detect and distinguish the presence of people inside the room and minor movements such as breathing. The device is perfectly integrated with the logic of the **HEMS MyVirtuoso Home** from which it is possible to create scenarios and automations so that when the sensor detects the slightest movement within its range it controls the switching on and/or off of lights, heat pumps, etc.

The device has been designed to be installed in residential and hotel contexts.
