Description

The dry contact actuator (NO/NC) for turning the boiler on and off is an intelligent switch that automatically manages the home boiler when one of the app-programmable digital thermostatic head kits is installed in the home. The device communicates directly with the TTD800 thermostatic heads which, depending on the state they are in (Eco or Comfort), **send requests to turn on or off**.

Efficient thermoregulation favors a **reduction in consumption** and, consequently, also in **heating costs**. Furthermore, it guarantees the

maintenance of the optimal level of comfort inside the home. This is why it is essential to have full control over the system. Quick installation, minimal technical knowledge required.

The product must be integrated with the My E-Thermostat basic kit or with a group of TTD800 thermostatic heads: add a dry contact actuator to the setup to maximize the potential of the system. If integrated into a basic kit.
