Description

The **fan coil control module** is an innovative device from the MyVirtuoso Home line, designed to manage any type of fan coil, ensuring maximum energy efficiency. Thanks to its ability to be installed inside the fan coil, so that it is not accessible to the user, it can be managed wirelessly using [the MyVirtuoso Home ES HUB \(Code 01335-0320-03 or 01335-0350-03\)](#) . This ensures precise control of temperature regulation, optimizing environmental comfort and reducing energy consumption.

The device is also an **ideal solution for retrofitting older systems that cannot be centrally controlled** , offering effective and cost-effective modernization without the need to replace the entire system. The module versions featuring **230 VAC 3-speed fan control (Code 01335-1870-00 and 01335-1872-00)** also allow for optimal control of the mixing valves of a mixed high- and low-temperature heating system. This makes the system extremely versatile and suitable for various system configurations, improving the overall efficiency of the heating system.

The device is able to communicate via the Z-Wave network with the MyVirtuoso Home HUB or with another HUB that supports this wireless communication protocol.

This device also acts as a **Z-Wave signal repeater** , allowing other devices that are normally out of range to communicate with the HUB.
