Description

Smart thermostatic head for **precise and comfortable temperature control**. It is compatible with all **standard M30 x 1.5 mm valve threads** and is designed to measure room temperature and **regulate the water flow of the connected radiator**. Additionally, it features a special sensor capable of **detecting the opening of a door/window** in the room and automatically turning off the radiator to avoid unnecessary energy waste.

The TTD800 thermostatic head is battery-powered and programmable via the Smart Life or EcoHome Life App, which allow for **24/7 scheduling** across four time periods. It replaces conventional heads, requires no tools for installation, and is compatible with **100% of thermostatic radiator valves** (Danfoss, Caleffi, Giacomini, Pintossi, RBM, etc.). It can be mounted either horizontally or vertically depending on the radiator type.

The My E-Thermostat Pack 2 base kit includes 2 wireless thermostatic heads and the TTD5000 Wi-Fi HUB, allowing control of multiple radiators or zones via a **free app**. Each HUB can monitor and program up to 16 TTD800 thermostatic heads using the Smart Life or EcoHome Life App available on **Android and iOS** stores.
