Description

The **HUB** is the main device of the Home Energy Management System MyVirtuoso Home. Without it, in fact, it is not possible to guarantee the correct functioning of the system as it controls, manages, monitors and programs all the connected devices and sends the data detected to the App.

The installation does not require any particular technical skills, however we strongly recommend contacting a specialized partner to avoid unpleasant malfunctions. Once installed, the HUB creates a **Z-Wave network**, internal to the home or office, thanks to which it can communicate with actuators, sensors, switches,... and fulfill all the needs that the customer expresses through the Free MyVirtuoso Home app.

The MyVirtuoso Home HUB is a mandatory device for the correct functioning of the MyVirtuoso Home system. A maximum of **50 devices** can be associated with each HUB.

The ESB model is equipped with a backup battery for an **autonomy of approximately 4 hours** in the event of a power failure.
