Description

The indoor temperature and humidity sensor is a device with Modbus output, ideal for monitoring environmental parameters in indoor environments.

Designed for easy integration into energy monitoring systems such as *MyVirtuoso Home*, this device enables continuous control of thermoregulation parameters.

This device is integrated with the *MyVirtuoso Home* HEMS through the MyMB interface/actuator for Modbus systems ([Code 01335-2085-00](#)).

In this way, all information is sent to the HUB, which displays the values to the user via the application.

Robust and weather-resistant, the sensor is built to operate in harsh environmental conditions, ensuring long-lasting durability and reliable performance.
