Description

The **Z-Wave interface/actuator for ModBus PV inverters, charging stations, smart electric meters** has been developed to monitor and control the operation of electrical systems that support the Modbus protocol.

The information collected by the interface is then translated into Z-Wave and sent to the MyVirtuoso Home HUB or another HUB that supports this wireless communication standard.

Controlled parameters:

- ModBus protocol reading registers
- ModBus protocol writing registers

The device, where not already integrated with known ModBus systems, requires **software customization** for its correct operation.
