Description

Energy consumption meter that can be installed on a DIN rail, ideal for prepaid energy supply services (Pay per Use). Remotely monitor the energy consumption of utilities and production lines. Thanks to **NB-IoT connectivity**, the MyPM-01S can easily be configured and controlled remotely via the **Contact Pro cloud platforms** (license sold separately).
The real-time vision of the measured data will help to make informed decisions to make the industrial environment more energy efficient, and to monitor the correct functioning of power lines (when anomalies are detected, the device sends alarm notifications to the platform).

The device monitors the electricity consumption data of single-phase systems and is equipped with a disconnect switch that cuts off the energy

when the paid budget is reached.
