Description

The **single-phase inductive meter** is the most accurate tool for measuring energy consumption. Thanks to the inductive clamp, it is not necessary to modify the existing electrical system, but simply connect the meter to the line you want to monitor. The inductive meter can also be used to measure the **energy produced by a single-phase** photovoltaic, wind or geothermal power system. Using a meter to monitor consumption and one for production, you can use the specific Widget on the MyVirtuoso Home App to have the **energy balance** in real time and stay updated on the self-efficiency of the building.
