Description

Smart thermostatic head for **precise and comfortable temperature control**. It is compatible with all **standard M30 x 1.5 mm valve threads** and is designed to measure room temperature and **regulate the water flow of the connected radiator**. Additionally, it features a special sensor capable of **detecting the opening of a door/window** in the room and automatically turning off the radiator to avoid unnecessary energy

waste.

The TTD101 thermostatic head is battery-powered and programmable, either manually or automatically, using the three intuitive buttons located on the device body. These allow for **24/7 scheduling**, manageable in eight periods (four for comfort temperature and four for reduced temperature).

It replaces conventional heads, requires no tools for installation, and is compatible with **100% of thermostatic radiator valves** (Danfoss, Caleffi, Giacomini, Pintossi, RBM, etc.).

It can be mounted either horizontally or vertically depending on the radiator type.

This product is **stand-alone**, meaning it does not require any HUB or App to operate. If you own multiple TTD101 thermostatic heads and wish to apply the same schedule to each, it is recommended to purchase the [TTD USB Programmer](#). With this device, once the schedules are defined via PC, they can be easily copied to all heads using the built-in communication port.

The TTD101 Pack 5 base kit includes 5 stand-alone digital thermostatic heads.
