Description

The Smardthome water meters of the **MyWMS** series, **MID** certified, are ideal for detecting the volume of hot or cold water consumed by each individual user.

They measure water consumption in residential or industrial applications where maximum data reliability is essential.

Equipped with a shut-off valve, they can be remotely controlled to stop the water flow in case of issues with the plumbing system or in applications requiring prepaid usage.

The high frequency of flow measurement, compact and robust housing make them an excellent alternative to mechanical meters.

All flow calculation and measurement circuits are designed to offer exceptional **precision** and **reliability**.

Thanks to **NB-IoT connectivity**, the device can be easily configured and remotely controlled via the [Contact Pro IoT](#) platform for web-based monitoring of collected data and process management with related reporting (subscription sold separately).

Main Features

NB-IoT wireless communication protocol.

Low pressure losses.

Battery life up to 10 years.

Replaceable batteries.

Wide dynamic measurement range.

Measurement accuracy.

Installation in any position.

Long product life, as there are no moving parts.

Automatic self-diagnosis and fault detection.

Reviews
