Description

Combustible gas detector (methane/LPG/propane) and carbon monoxide (CO) detector that detects concentration quickly and accurately. If the values exceed the alarm level, the detector will emit a continuous **audible alarm** of 85 dB. The device can be monitored in real time via the **Smart Life App**: if gas or carbon monoxide exceeds the alarm level, the detector will IMMEDIATELY send a **Wi-Fi notification**.

The gas and carbon monoxide detector is equipped with a **European plug**. We suggest, to prevent the device from being removed (e.g., by Airbnb guests), removing the plug and connecting the device directly to the power line. Detector certified according to standard **EN 50291-1:2018 and EN 50194-1:2009**. Does not detect carbon dioxide (CO2).

To correctly install the device, follow the instructions:

- Detection of gas heavier than air (LPG): installation height from the floor 0.3 ~ 1.0 m.
- Detection of gases lighter than air (methane, carbon monoxide): installation height from the ceiling, 0.3 ~ 1.0 m.

Devices should preferably be placed at a distance of 1 to 3 meters from the combustion source and in a horizontal position.

[ACCESSORIES]: if purchasing the gas and carbon monoxide detector, we recommend purchasing the shut-off valve that allows gas flow to be stopped in case of alarm.

Suitable for residential settings such as homes, short-term rentals, Airbnb, and commercial environments such as restaurants, hospitals, hotels, etc.
