Description

The **modulating Wi-Fi chronothermostat** is a device from the Comfort.me DUO line which offers, in combination with the dedicated EcoHOME Life app, precise control and management of the heating system via an OpenTherm boiler; the weekly programming and most of the functions are carried out via the App. Thanks to the Wi-Fi connection, the dry contact chronothermostat can be **programmed and managed remotely**, as well as it is possible to view the temperature of the room in which it is located.

In addition to the Wi-Fi programming mode, the chronothermostat can be set manually thanks to the convenient buttons on the display. With

these it is also possible to **configure the parameters of the thermal curve** as desired. By setting a high or low value it is possible to heat the surrounding environment more or less quickly respectively.

The modulating Wi-Fi chronothermostat is the ideal solution both in the case of a new installation and in the case of replacing the old thermostat. Wall or surface mounted, installing the Wi-Fi thermostat requires minimal technical skills, all linked to the wiring of the communication control unit (included). It has the task of receiving information from the chronothermostat and modulating the connected device.
