Description

The **OpenTherm boiler switch/actuator** is a fundamental tool for achieving the objectives of predictive maintenance, adaptive energy management, qualitative data analysis and remote parameter programming for correct operation of the systems. Thanks to the **MyOT interface/actuator for OpenTherm modulating boilers** it is possible to control the temperature set points of the domestic hot water and the heating system, as well as all the technical parameters essential to verify the perfect functioning of the **OpenTherm boilers**.

The collected information is then translated into Z-Wave and sent to the MyVirtuoso Home HUB or another HUB that supports this wireless communication standard.
