Description

The **Z-Wave interface/actuator for thermoregulation systems, smart meters and ModBus sensors** has been developed to monitor and control the operation of systems that support the Modbus protocol, such as boilers, heat pumps, meters, etc.

The information collected by the interface is then translated into Z-Wave and sent to the MyVirtuoso Home HUB or another HUB that supports this wireless communication standard.

Controlled parameters:

- ModBus protocol reading registers
- ModBus protocol writing registers

The Z-Wave interface/actuator for ModBus systems, where not already integrated with known ModBus systems, **requires software customization** for its correct operation.
